MANITOBA CHAMPIONS

TOPIC OF THE DAY Sexually transmitted infections and blood borne pathogens

AUTHOR Mariana Echeverri

DATE March 15, 2023

THE REASON WHY

We wanted to learn about sexually transmitted infections and blood borne pathogens, and the differences between them

HOW WE DID IT

Dr. Yoav Keynan shared a presentation that reviewed the most common STBBI's including syphilis, chlamydia, gonorrhoea and HPV

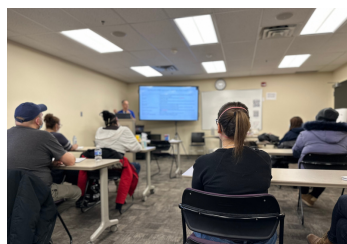

WHAT WE LEARNED

We learned about the different types of STBBI's, if they are viral, a bacteria or a parasite and some general characteristics about them. We also learned about how they are most commonly treated. We also learned that syphilis is an organism that has been around for thousands of years!

THE FACILITATOR

Dr. Yoav Keynan
